

Skeleton Cut-up

ProNest® optional module

Benefits:

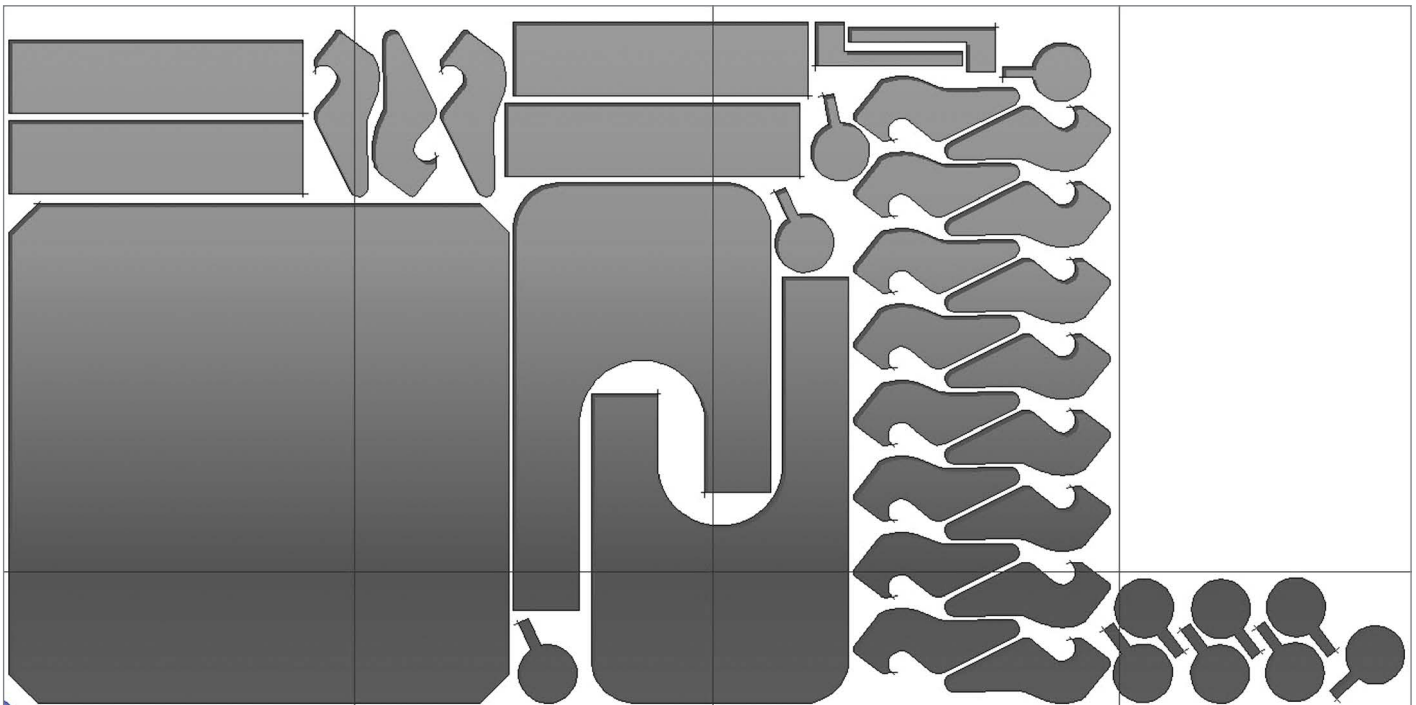

- Faster and easier material handling
- Better workplace safety

Use Skeleton Cut-up to make dedicated cuts to a sheet, making it easy to remove skeleton material from the table when the job is complete. Skeleton cuts are added automatically; you can then edit lines to meet your needs and define other parameters that work best for your job.

Here is what people are saying about Skeleton Cut-up:

“Handling of the skeleton material was a major hold-up to our production cycle, requiring time-consuming manual torch cutup and removal from the machine bed. We purchased the Skeleton Cut-up module to overcome this bottleneck. ProNest automatically cuts the skeleton material into easy-to-remove chunks, sized to match our waste receptacle. When you add that up, it saves between 15–30 minutes per sheet in unloading time. Over our annual production of 4,000 sheets, the labor savings alone is significant (25–50 man-weeks per year).”

– Mark Nind, Whale Tankers
