## **Hypertherm introduces HyAccess extended consumables for cutting and gouging in hard to reach areas**

**HANOVER, N.H.—Oct. 23, 2014**—Hypertherm, a U.S. based manufacturer of plasma, laser, and waterjet cutting systems, today announced the availability of new extended consumables for its Powermax30, Powermax30 XP, and Powermax45 plasma systems. Patented HyAccess™ consumables extend three inches longer than standard consumables for better visibility and accessibility when cutting or gouging in hard to reach areas or confined spaces.

The improved visibility and access achieved with HyAccess eliminates the need for certain secondary operations or multiple cutting passes. Metal workers specializing in equipment and vehicle repair, structural work, and jobs requiring angular cutting or gouging now have a new tool to make hard work easier.

HyAccess consumables are available from all authorized Hypertherm distributors. The consumables are offered individually or as part of an all-in-one kit that includes two electrodes, two nozzles (one for cutting and one for gouging), a retaining cap, and swirl ring.

“The introduction of our new patented HyAccess consumables underscores Hypertherm commitment to developing torch and consumable products that help our customers tackle a range of cutting jobs,” said Brenda Mahoney, product marketing manager for Hypertherm’s torch and consumable team. “Like all Hypertherm consumables, these products are precision manufactured to our strict tolerance requirements for long life and consistent performance.”

Hypertherm designs and manufactures advanced cutting products for use in a variety of industries such as shipbuilding, manufacturing, and automotive repair. Its product line includes plasma, laser and waterjet cutting systems, in addition to CNC motion and height controls, CAM nesting software, and consumables. Hypertherm systems are trusted for performance and reliability that result in increased productivity and profitability for hundreds of thousands of businesses. The New Hampshire based company’s reputation for cutting innovation dates back nearly 50 years to 1968, with Hypertherm’s invention of water injection plasma cutting. The 100 percent associate owned company, consistently named one of the best places to work in America, has more than 1,300 associates along with operations and partner representation worldwide.
