Quote Tool

ProNest LT optional module

About

Quote Tool provides a simple, structured way to create job quotes in ProNest LT. It builds on ProNest LT production, material, and labor cost data to generate customer-ready quotes that account for secondary operations, markups, discounts, and other job costs.

Because Quote Tool uses actual nests and machine data from ProNest LT, you can create more accurate, consistent estimates without a separate quoting application. When a quote is approved, its part information can move directly into production for nesting and cutting.

Benefits

- **Stay in ProNest LT:** Create quotes without switching to a separate quoting application.
- **Quote with confidence:** Use nesting and machine data to estimate material, production, and labor costs.
- **Move into production faster:** Convert approved quotes into jobs with part information ready for nesting and cutting.

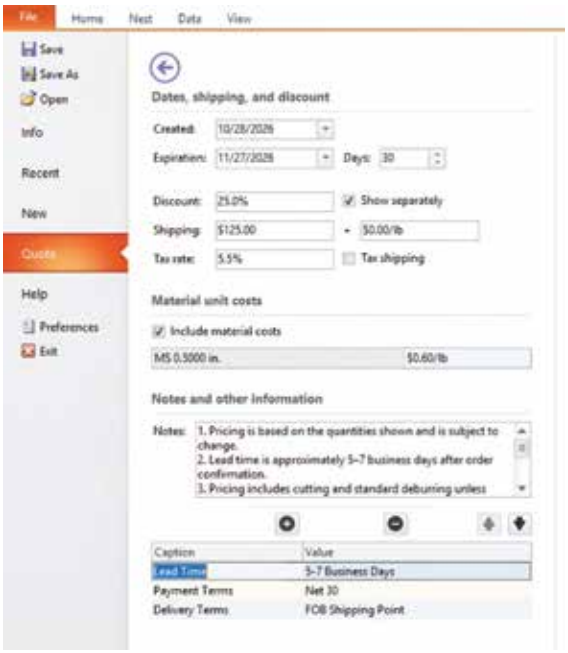

How it works

Quote Tool is built into ProNest LT. Follow three steps to create and manage a job quote:

1. **Create or open a quote:** Start a new quote or update an existing one. Add line items from CAD files, vector PDFs, SVG files, the variable shape part library, or custom entries. Multi-select and drag-and-drop capabilities make file entry more efficient.
2. **Configure quote details:** Set quantities, variable shape part dimensions, and secondary operations for each line item. Include or exclude items from the customer quote without changing the underlying job.
3. **Share and produce:** Publish the quote for the customer or convert it into a ProNest LT production job with the associated part information ready for nesting and cutting.

Standard feature highlights

- Use customer records from the ProNest LT database, including contact information, addresses, default markup values, and tax rates
- Generate itemized quotes from nesting jobs or imported part files
- Estimate part costs and material usage with the ProNest LT nesting engine
- View itemized pricing for individual parts
- Add secondary operations and their associated costs
- Apply markups, discounts, taxes, and shipping costs at the quote level
- Set and manage quote statuses throughout the quoting process

Consider including other optional modules

- Advanced Automatic Nesting
- Productivity Pack
- Advanced Productivity Pack
- SOLIDWORKS® Software Interface
- Inventor® Software Interface
- Pipe and Fittings
